QUIDAM GLASS SOLUTION

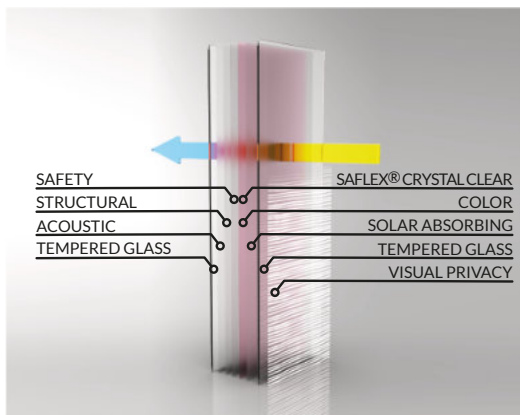

SAFLEX® CRYSTAL CLEAR

Saflex® Crystal Clear is the new PVB interlayer produced by Eastman which gives low-iron glass a highly desirable aesthetic to create the most color-neutral laminated glass available in our market being classified as safety glass.

Saflex® Crystal Clear was specifically formulated to provide exceptional durability when exposed to natural weathering and has demonstrably met or exceeded many regulations for laminated safety glazing.

Saflex® Crystal Clear was designed to remain virtually undetectable at any visible angle, in any light.

Saflex® Crystal Clear offers flexible processing, is available also for large projects and can be combined with other Saflex interlayers, such as Saflex® Solar, Saflex® Structural, Saflex® Acoustic and Vanceva® Colors, giving designers and architects a wide range of creative and design freedom for their projects.

Chorus by Quidam is the "all in one" laminated and tempered glass, made thanks to the synergy between Quidam and Saflex®, world leader in the production of pvb interlayers, which give glass different characteristics able to meet specific design needs.

Chorus by Quidam is therefore a "configurable" glass based on the performance required in terms of structural capacity, solar protection, thermal and acoustic insulation, resistance, aesthetics, safety. These characteristics make it the ideal material for the construction of shelters, interior balustrades, parapets for windows and balconies.
