AND TIMELESS  
CREATIVITY**

## **SANDBLASTING**

Made with a mechanical process, sandblasting exposes the glass plate to a sand jet that erodes the surface lightly or, if desired, very deeply, presenting highly valuable functional and aesthetic qualities.

Decorations, engravings, glazes and contrasts of light can be emphasized by an appropriate use of color, capable of transforming the glass plate into a true work of art.

The decorations obtained with sandblasting can be designed so that their three-dimensional effect is enhanced in the presence of a light source.

## AESTHETICS AND FUNCTIONALITY

Besides its decorative value, sandblasting is particularly useful as it allows the transparency of the glass to be modulated without obstructing the passage of light.

By alternating the sandblasted areas with the transparent ones, it is possible to satisfy the need for privacy in an accurate and targeted way. Deep sandblasting can be enriched and personalized through the use of color.

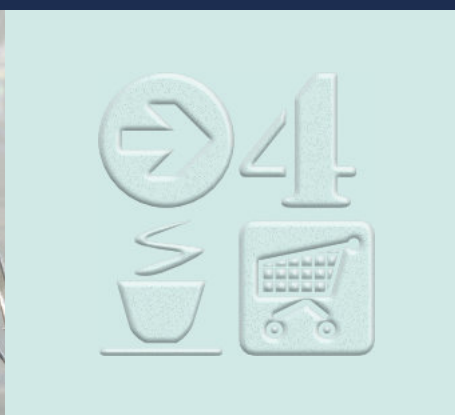

## PRODUCTION

Every phase of sandblasting is carried out internally.

For personalised decorations we require vectorial files in Pdf, Ai or Eps format in natural size or in scale on the measurement of the plate. Our graphic designers will verify and eventually modify the tracks to allow a correct processing.

On request, we can carry out a complete tracing on designed decorations.

5											covering black

#### LIGHT SANDBLASTING

removes clarity and transparency from the treated surface without compromising its brightness.

#### BRILLIANT SANDBLASTING

it has the characteristic "coarse grain" abrasion

#### DEEP SANDBLASTING

provides for the removal of 2-3 mm of material giving a remarkable three-dimensional effect

#### DEEP COLORED SANDBLASTING

it recovers the lucidity and a certain transparency of the treated parts, with a three-dimensional final effect.

Sandblasting can be carried out on any type of slab, even shaped, tempered, stratified.

The sandblasted slabs can also be assembled in double glazing and meet the safety requirements.
